Synthesis and Antimicrobial activity Of Some New Thiosemicarbazones

Amit M Tyagi *, M. P. Toraskar , V. J. Kadam

ABSTRACT

Some new [5-mercapto-3-(p-nitrophenyl)-4-amino substituted-1,2,4-triazole] thiosemicarbazones were synthesized in microwave and their structures were confirmed by I.R. and ¹H NMR and their antimicrobial screening against *E. Coli* , *Staphylococcus aureus* and *Candida albicans* were established by zone of inhibition.

Key words: thiosemicarbazones, zones of inhibition, antimicrobial activity.

1. INTRODUCTION

In recent years much attention has been focused on the synthesis of 1,2,4-triazoles and their derivatives because of their wide spectrum biological properties. A large number of Nitrogen containing heterocycles display antifungal, antibacterial, anticonvulsant, insecticidal, anti-inflammatory, tuberculotherapeutic and anti-HIV activity¹⁻⁶. The earlier studies have also indicated that the thiol/mercapto grouping at position 5 of 1,2,4-triazoles enhances biological properties⁷⁻¹⁰. It was thought of interest to synthesize some substituted 5-mercapto-3(4-nitrophenyl)-4-amino substituted-1,2,4-triazole compounds for their antibacterial and antifungal activity.

2. MATERIALS AND METHODS

All the chemicals and solvents were obtained from commercial sources like S. D. Fine Chem. Research Lab. Ind., Lancaster (Germany) and purified using standard procedure whenever required. Melting points were measured in open capillary tube on VEEGO (VMP-D) melting point apparatus and are uncorrected. IR spectra were recorded in KBr pellets on a SHIMADZU FTIR 8400S infrared spectrophotometer. The ¹H-NMR spectra were determined in DMSO-d₆ at 300 MHz on a JEOL FT NMR spectrophotometer using TMS as an internal standard. The progress of the reaction and the purity of compounds were monitored by TLC using silica gel plates. Microwave assisted reaction were carried out in a "CATALYST SYSTEM" microwave oven.

Micro Wave Assisted Synthesis of Ethyl-p-nitrobenzoate (1) (Figure 1)

In a 250 ml Microwave flask, a mixture of 25 gm (0.149mole) pure p-nitrobenzoic acid, 66.8 gm (80ml, 1.45 mole) of absolute ethanol and 11.92 gm (6.49ml) of concentrated sulphuric acid were taken. A few porcelain chips were added and the reaction mixture was refluxed in Microwave for 2.5 hours at 7-8 power. The excess of ethanol was removed under reduced pressure and the reaction mixture was cooled. Sufficient saturated solution of sodium bicarbonate was added to render the reaction mixture free from acid. Ethyl p-nitrobenzoate was separated out as solid. It was filtered out on buchner funnel and was dried in air and was collected.

Molecular formula $C_9H_9NO_4$, Molecular weight 195, Yield (%) 75.36%, m.p. 56-59 °C

IR (KBr, cm^{-1}): 1716.53($COOC_2H_5$), TLC: Ethyl acetate: Hexane (3:2)

Microwave Assisted Synthesis of P-nitrobenzocarbonylhydrazide (2)

A mixture of Ethyl p-nitrobenzoate 26.00gm (0.13 mole) and hydrazine hydrate 9.90gm, (9.62ml, 0.19mole) was refluxed with 60.00ml absolute Ethanol for 3-4 hours in Micro Wave Oven at 6-7 power. Then Ethanol was distilled off, the reaction mixture was cooled, yellow crystals of p-nitrobenzocarbonylhydrazide was precipitated out, it was filtered on buchner funnel, dried and collected.

Molecular formula $C_7H_7N_3O_3$, Molecular weight 181, Yield(%)73.45%, m.p.210°C

IR(KBr, cm^{-1}): 1678 (CONH), 1518 (C=NO₂), TLC: Ethyl acetate: Hexane (3:2)

Synthesis of Potassium Salt of P-nitrobenzocarbonylhydrazide (3)

590ml absolute Ethanol was taken in a 1000ml round bottom flask, 40.50gm (0.72mole) potassium hydroxide was added in it and was stirred to dissolve potassium hydroxide. In this mixture 72.00gm (0.39 mole) p-nitrobenzocarbonylhydrazide and 54.96gm (43.62ml, 0.72mole) carbon disulphide was also added. This mixture was agitated for 12-18 hour. It was diluted with 149ml dry Ether and the product was filtered on buchner funnel and vacuum dried at 65-70°C. The salt prepared as described above was obtained in quantitative yield and were used without further purification.

Fig 1. Scheme of Synthesis

Preparation of 5-mercapto-4-amino-3-(p-nitrophenyl)-1,2,4-Triazole (4)

105.00gm (0.35mole) Potassium Salt was dissolved in sufficient water in 1000ml round bottom flask. To this solution, 99% Hydrazine Hydrate 26.25gm (25.48ml, 0.52mole) was added. The reaction mixture was refluxed on a water bath until the evolution of H₂S gas ceased. It was then diluted with cold water (200-300ml) and was carefully acidified with concentrated hydrochloric acid. Thus yellowish white solid was precipitated out, it was filtered on buchner funnel, washed with cold water, dried and recrystallised from ethanol.

Molecular formula $C_8H_7N_5SO_2$, Molecular weight 237, Yield 56.59%, m.p. 245 °C

IR(KBr, cm^{-1}): 3350(NH₂), 3093,2956.67,835.12 (-CH),1514.02 (C-NO₂), 1606.59 (C=N),1352.01 (C=S),1170 (C-N-C), TLC: Ethyl acetate: Hexane (3:2)

Synthesis of 5-mercapto-3-(p-nitrophenyl)-4H-1,2,4-triazole-4-yl thiosemicarbazide (5)

Sodium hydroxide 1.1gm (0.027 mole) and carbon disulphide (0.021mole, 1.2 ml) was added to a solution of 5-mercapto-4-amino-3(p-nitrophenyl)-1,2,4-triazole 2.00gm (0.0084mole) in DMF (20ml). The mixture was stirred at 0-10°C for 1:45 hour, this stirred mixture was added Hydrazine hydrate 1.2ml (0.024 mole) and stirring was continued at 70-80 °C for 1:45 hour, more on adding crushed ice, the greenish white solid crystals separated out which was recrystallized from ethanol-water (4:1).

TLC: Ethyl acetate: Hexane (3:2)

Synthesis of Schiff's bases of 5-Mercapto-3-(p-nitrophenyl)-4H-1,2,4-triazole-4-yl-thiosemicarbazone (General Microwave Procedure) (6)

5-Mercapto-3-(p-nitrophenyl)-4H-1,2,4-triazole-4-yl-thiosemicarbazide 0.22gm (0.0007mole) and sufficient glacial acetic acid was taken in a 150ml microwave flask. pH was adjusted in 3-5 range. To this mixture various aromatic aldehydes (0.001 mole) were added and reaction mixture was refluxed in microwave oven at power 7 (455 watt, 65%) for 2.5 hrs. Reaction was monitored by TLC. Then the reaction mixture was poured into crushed ice, solid schiff base was precipitated out. It was filtered on simple funnel by using whatman paper and solid was washed with water, dried and recrystallized from ethanol-water (4:1).

Antibacterial activity

The compounds 5 and 6a-6j were screened in vitro for their antibacterial activity against pathogenic organisms E. Coli and S. Aureus using disc diffusion method (nutrient agar) at a concentration of 100 µg/ml and 150 µg/ml with DMF as the solvent¹¹⁻¹⁴. After 24 hrs of incubation at 37 °C the zones of inhibition formed were measured in mm with standard drug Streptomycin (Table 2).

Table 2: Inhibition Zones (mm)

Sr No	Concentrations ($\mu\text{g/ml}$)	E. coli	S. aureus	C. albicans
5	150	18	15	28

Antifungal activity

The compounds 5 and 6i-6j were screened in vitro for their antifungal activity against *Candida albicans* using disc diffusion method (sahbraud dextrose agar) at a concentration of 100 $\mu\text{g/ml}$ and 150 $\mu\text{g/ml}$ with DMF as the solvent¹⁵⁻¹⁷. After 24 hrs of incubation at 37 °C the zones of inhibition formed were measured in mm with standard drug Fluconazole (Table 2).
